

# CAST PUZZLE

# Instructions for CAST DUET

1. Start position.

2. Label the lattice's top and bottom respectively as A and B, and number the grooves as shown below. Label the rings respectively as the L ring and R ring. (Since both rings have the same shape, it does not matter which is L and which is R).

3. Pass the projecting part of the ring through the lattice's grooves in the order given below.

There are five solutions in all: one for taking both rings off and four for putting the two rings together at the indicated places on the lattice. Begin with the rings removed from the lattice for solutions involving the rings to be attached together at the indicated places.

(Removing the rings) ※ The rings are indicated as L and R in only this solution.

Looking at the starting position from the top side, the left-hand side ring is L and the right-hand side ring is R.

Begin with the rings removed, to solve the puzzle in the four ways indicated below. (Since both rings have the same shape, it does not matter which is L and which is R).

(Putting the ring together at ▽)

(Putting the ring together at ▲)

(Putting the ring together at ▴)

(Putting the ring together at ▾)

(To the customer)  
This puzzle can be solved by following these explanatory diagrams.
